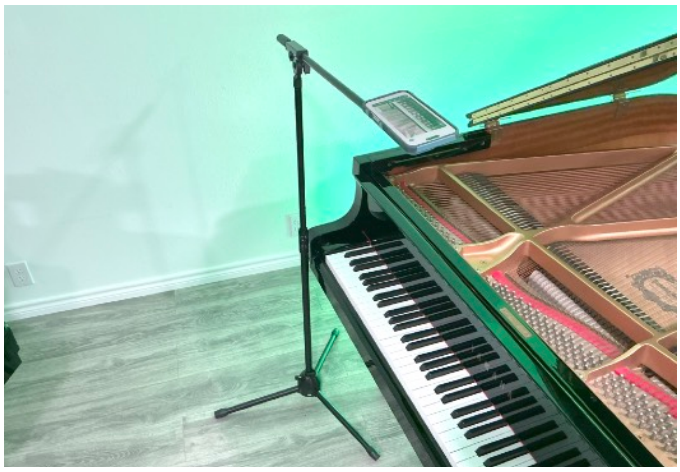
Dear Customer,

Thank you for purchasing our Camera Stand. We created this stand because we noticed that students and teachers alike needed a way to place a camera both above AND over their keyboard so we could clearly see their hands in an online piano lesson. It is also helpful in lessons on other musical instruments, or when learning art, writing, or crafts online. Content creators also love it for hands-free overhead views. The stand is robust and may be assembled in two easy steps. `

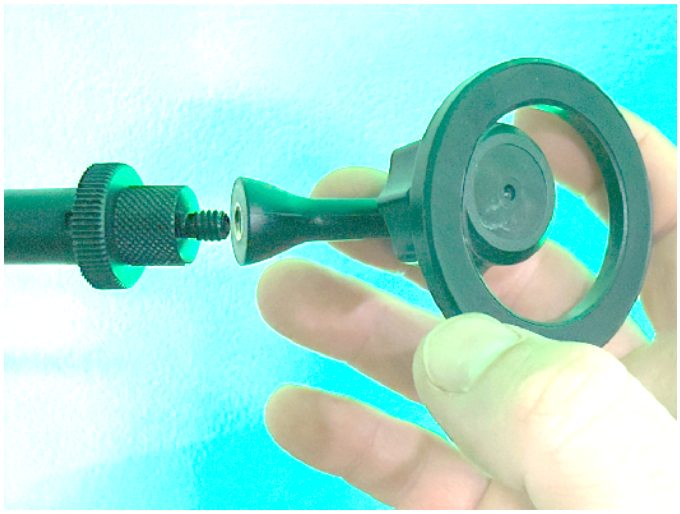


Step 1: Mount the 1/4 Inch adapter on the end of the horizontal rod.

It is easiest to install the 1/4” adapter by loosening the horizontal rod and spinning the rod while holding the adapter still.

The 1/4 inch adapter allows you to mount anything with a camera tripod mount on it, such as a web cam, a device clamp, or the provided magnetic phone mount (see step 2).

Step 2: Mount the provided magnetic mount to hold to your phone.

The magnetic mount provided fits onto the 1/4 inch adapter and is a direct fit for MagSafe Apple devices. The magnetic mount also comes with an steel ring sticker that allows you to use it with non-MagSafe devices and tablets (smaller tablets are usually adequately stable on the extended horizontal arm).


Note: we do not recommend that you put heavy devices such as a mirrorless camera on the mount without counterbalance, as it will tip over when the horizontal arm is extended.
